Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bader in view of Tjernstrom.

Bader discloses a carrier tool (10) for cutting plates in a cutting tool, the cutting plate adjoining at least one plate seat wall in the cutting tool (10), fine adjustment elements for adjusting the position of the cutting plate being provided, the fine adjustment element consisting of a rotatable adjustment bolt (26) having an outer surface configured as a conical surface (32), the conical surface (32) forming a plate seat wall, the adjustment bolt (26) being arranged in a guide hole (30) extending at an angle to the plate seat wall. With respect to claims 5 and 6, the limitations directed to the angular configuration of the elements appear to be met by the Bader. Bader lacks the disclosure of a bolt having a lateral surface that changes at the greatest radial extent of the conical surface into a cylindrical surface. Tjernstrom discloses such a bolt (20). Applicant's attention is directed to column 3, lines 1-11. It would have been obvious to a skilled artisan at the time of the invention to form the bolt of Bader with a lateral surface that changes at the greatest radial extent of the conical surface into a cylindrical surface in the manner as

taught by Tjernstrom in order to insure a tighter connection between the associated elements.

In regard to claim 8, Official notice is taken of the use of hardened steel etc. for a bolt.
